

```

public class UserUtility {
    private static String username;

    public static String createUsername(String first, String last){

        String firstsub = first.substring(0, 3);
        String lastsub = last.substring(0, 3);
        username = firstsub + lastsub;
        return username;
    }
}

public class UserUtilityDriver {
    public static void main(String[] args) {
        String userName = UserUtility.createUsername("liz", "boez");
        System.out.println(userName);
    }
}

```
